Open-E certifies two servers by Platinum Partner EUROstor for Open-E JovianDSS and DSS V7 software

Software specialist Open-E tested and certified the ES-8708XSS JDSS and ES-8724XSS with its proven storage management solutions

Atlanta, Georgia; September 20, 2016: – Open-E, a leading developer of innovative data storage software used for building and managing reliable NAS and SAN storage environments, has successfully certified two servers by Platinum Partner EUROstor. The storage specialist from Filderstadt, Germany supports leading enterprises worldwide in managing and protecting their storage, accounting for over 300 Open-E cluster installations to date.

The system certified for Open-E's ZFS-based JovianDSS storage management software is the ES-8708XSS JDSS, a flexible high performance solution that can be easily deployed in any environment and for a variety of applications. In combination with Open-E JovianDSS the server offers great adaptability, tiered and all-flash storage setups, high IOPS through RAM and SSD caching as well as first-rate expandability with EUROstor's high-density JBODs. The ES-8708XSS JDSS is also a perfect fit for Mirrored Shared Storage setups, providing redundancy not only with the cluster heads but also with the JBODs connected. Multiple host ports with up to 25GbE help to avoid data throughput bottlenecks.

The second certified storage server is the EUROStor ES-8724XSS with the XFS-based software Open-E DSS V7. It is well-suited for iSCSI and NAS storage solutions with snapshots and replication, and can also be configured as an Active-Active High Availability Cluster. The system offers everything that customers expect from a well-designed iSCSI system: each server can be provided with private volumes to set up real SAN networks on an Ethernet. Open-E's engineers recommend the server especially for iSCSI storage, backup storage and NAS filers.

"Thanks to our close and long-term partnership with Open-E, we are always able to provide new and faster hardware technologies in short timeframes," said Franz Bochtler, CEO of EUROstor. "Through mutual certification of those new solutions we can guarantee the reliability of the complete system. Especially when we introduced the new 25Gbit Ethernet cards of QLogic, our cooperation has again proven its strength."

Krzysztof Franek, CEO and president of Open-E added: "We benefit immensely from strong partnerships like we have with EUROstor. Only through them we can continuously improve our software products to deliver solutions with the performance and quality customers expect."

Both storage systems have been certified for standard and High Availability use. Find the certification reports on the Open-E website:

About EUROstor

EUROstor has been a manufacturer of storage systems for more than 12 years. Originally manufacturing RAID systems, today the main part of the product portfolio are server based systems, acting as flexible storage servers, tailor-made for the customers' needs.

Solutions range from small file servers and CCTV storage to high available storage clusters, scale-out clusters and cloud solutions.

EUROstor, located in Filderstadt near Stuttgart (Germany), sells to professional end users all over Europe, SMBs, universities and research institutes and data centers.

About Open-E

Open-E is a well-established developer of IP-based storage management software. Open-E JovianDSS, Open-E DSS V7 and the free Open-E DSS V7 SOHO are robust, award-winning storage applications which offer excellent compatibility with industry standards, and are the easiest to use and manage. Additionally, they are some of the most stable solutions on the market and undisputed price performance leaders.

Open-E accounts for over 27,000 installations world-wide and has received numerous industry awards and recognition. Thanks to its reputation, experience and business reliability, Open-E has become the technology partner of choice for industry-leading IT companies such as Citrix, Intel®, LSI, VMware, and Adaptec.
