

## Partnership for server virtualization

### EUROstor signs contract with Scale Computing

*Filderstadt, Germany, July 20th, 2022*

Compact, affordable virtualization solutions that can be expanded as needed simply by adding cluster nodes ("scale-out clusters") are enjoying increasing interest. Especially as edge solutions or for remote offices that want to manage their data separately but then back it up to headquarters, such solutions are ideal.

For this reason, EUROstor, as a provider of servers and storage solutions, has added Scale Computing's product line to its portfolio and signed a partnership agreement to this end.

"We are very pleased to partner with EUROstor for the European market," said Johan Pellicaan, Vice President & Managing Director EMEA at Scale Computing. "Our SC//Platform is a powerful all-in-one platform specifically designed to run applications at the edge of the network. EUROstor has a network of customers ranging from mid-sized organizations to large industrial enterprises, all of which can benefit from Scale Computing's maintenance-free, fail-safe solutions. We look forward to working with EUROstor to provide our products and services to their customer base."

"Compact virtualization solutions are especially optimal for small and medium-sized businesses, but also for departments with their own local IT," said Franz Bochtler, CEO of EUROstor. "We were actually surprised when we saw how fast and easy it is to install something like this."

The systems are offered with 5 years of 24x7 hardware and software support and remote support for the initial installation.

For example, a minicluster of three HE150 nodes, each with 2 TB on NVMe, is available for as little as € 9,990 (with VAT € 11888.10).

#### **About Scale Computing:**

Simplicity Engineered: Scale Computing was founded with the goal of helping organizations facing increasing challenges with the use of traditional virtualized environments. Increasing complexity, increased time and lack of resources are making daily operations difficult for many IT departments.

Today, Scale Computing delivers IT infrastructure solutions for edge computing, virtualization and a hyper-converged platform to customers worldwide. Scale Computing SC//Hypercore® software eliminates the need for traditional virtualization software, disaster recovery software, servers and shared storage and replaces them with a fully integrated, highly available system.

**About EUROstor:**

EUROstor has been a manufacturer of storage systems since 2004. At the beginning the company produced RAID systems; today server-based systems, operating as flexible storage servers are the main constituents of our product portfolio – perfectly custom-tailored in accordance with the respective requirements. The solutions range from small file servers and CCTV storage to highly-available storage clusters, scale-out clusters and cloud solutions.

EUROstor is based in Filderstadt near Stuttgart and distributes its products to end customers throughout Europe, medium-sized companies, universities, research institutes and computer centers.

Further information about EUROstor storage solutions can be found at <https://www.EUROstor.com>.
